

Do-now:

1. Take out Locus Theorem notes
2. Graph the lines $x = -1$ and $y = 3$.

What is the locus of points equidistant from the lines $y = 3$ and $y = -1$.

a line

$$y = 1$$

Graph the locus of points 3 units from the x-axis.

parallel
lines

$$y=3, y=-3$$

Graph the locus of points 5 units away from the origin.

circle

$$x^2 + y^2 = 25$$

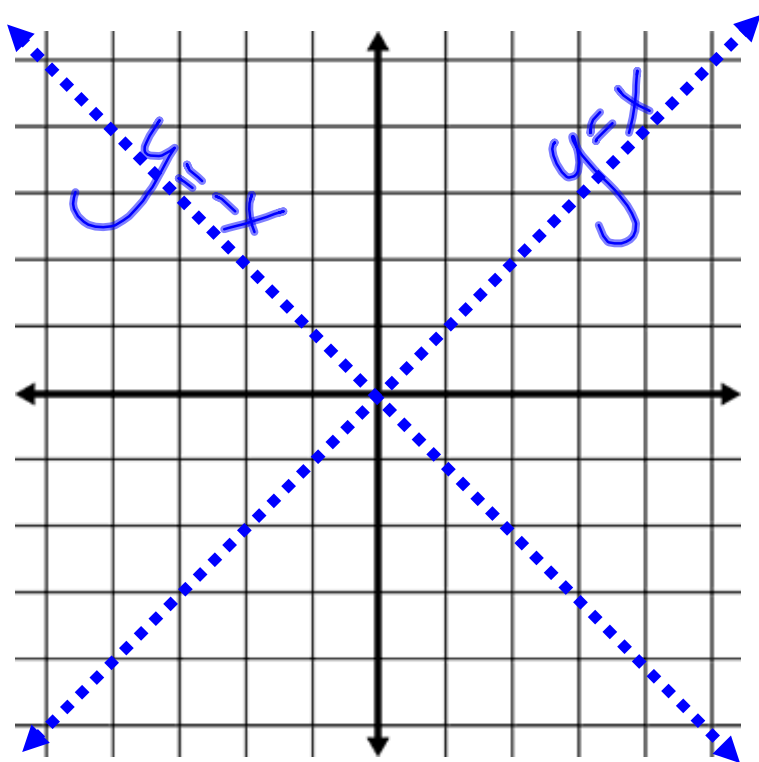

How many points are both 5 units from the origin and 3 units from the x-axis? Identify the coordinates of the points of intersection.

4 points
 $(-4, 3)$
 $(4, 3)$
 $(4, -3)$
 $(-4, -3)$

What is the locus of points equidistant from the x and y axes?

Intersecting
lines

$$y = x$$

$$y = -x$$

Graph the locus of points equidistant from the x and y axes AND equidistant from the lines $y = 3$ and $y = -1$?

2 points

$(1, 1)$

$(-1, 1)$
